

CRITICAL INFRASTRUCTURE

Credential and verify essential private-sector resources that maintain critical infrastructure during a range of disasters. Whether quarantines / curfews are imposed or access to disaster-impacted areas must be limited, Salamander can be implemented in a county, region, or state within hours.

With our web-based, civilian-specific SalamanderLiveTM account, easily and efficiently pre-credential approved private sector entities and generate just-in-time credentials. Credentials are consistent with FEMA's Crisis Event Response and Recover Access (CERRA) Framework and can be distributed in a physical or digital format.

Private Sector Organizations Pre-Credentialed

Easily add and manage civilian resources within SalamanderLive, a web-based tool that can be accessed anywhere with an internet connection. Within the solution, either manually input data or import a file to quickly add personnel or equipment information before printing a credential. Add information such as name, photo, private sector organization, and more.

Credentials can be scanned by Salamander's mobile TRACK APPs (Android and iOS) out in the field to verify the authenticity of credentials that are presented by private sector employees.

**100% Accountability
Solution for Private Sector**

Private Sector Organizations Not Pre-Credentialed

Managing civilian resources that are not pre-credentialed is just as easy. Private sector personnel may still need to travel to perform jobs critical to the county or state's infrastructure. Easily collect the individual's information at checkpoints, such as weigh stations, and generate a credential that can be scanned and tracked during the crisis. These credentials can be a standard ID badge, a piece of paper, or even a digital copy.

Pre-Credentialing:

1. Import private-sector organization's personnel information into SalamanderLive
2. Distribute physical or digital credentials to designated private-sector organization
3. In the field, verify private-sector credentials with TRACK APPs and SALAMANDER IDENTITY VERIFICATION (Android, iOS)

Just-In-Time Credentialing:

1. Manually add approved individual into SalamanderLive
2. Distribute physical or digital credentials to approved individual
3. In the field, verify private-sector credentials with TRACK APPs and SALAMANDER IDENTITY VERIFICATION (Android, iOS)

Reporting:

1. Easily access and report from SalamanderLive database
2. Know the degree of expired or counterfeit credentials being used
