

ASSET ACCOUNTABILITY FROM HOME

Employees working from home is slowly becoming the norm. One issue that organizations are experiencing is not knowing what equipment their employee's have in their possession off-site. Salamander provides organizations with a true accountability solution that not only accounts for all assets on-premises, but also off-premises, which includes employees working from home.

Our solution is easy to use and can account for anything - both assets and consumables. It's important that organizations account for all inventory no matter the type, size, or cost.

Asset Examples:

- Docking Stations
- Office Furniture
- Testing Equipment
- Mobile Phones
- Tablets
- Computers
- Monitors
- Display Units
- Mice
- Telephones
- Headphone Sets
- And More...

The Salamander Approach

Know What Assets You Have

- Tag ALL equipment - both big and small

Fill Out Equipment Profile Completely

- Maximize the extensive profile of each individual asset for future reference (including costs and reorder info)

Know The Location Of Your Assets

- Set the latitude and longitude of your assets and not only know where they are but see them plotted on the map

Schedule Asset Maintenance

- Create routines and manage all repairs (even set alerts to be notified)

Assign Equipment To People On Issuance

- Keep a real-time log of what has been assigned to whom so no matter where assets are used, someone can be held accountable

Right Assets, Right Place, Right Time

- Move assets as you use them, real-time in and out of events
