# SALAMANDERLIVE™

**SalamanderLive™ is a web-based solution and is the core of INTELLIGENT ACCOUNTABILITY™.**

## Web-Based Resource Management:

- Manage organization hierarchy
- Manage personnel data including generic employee information, location / contact, medical, qualifications / training, and more
- Manage equipment data including generic details, purchasing, location / contact, alerts, qualifications, and more
- Create and manage assignment lists
- Print interoperable credentials

## Event Management:

- Information collected from the field is pushed into SalamanderLive
- Create a common operating picture for all organizations involved
- Have increased visibility to what resources are on-scene
- Access event costs (people and equipment) in real-time

*SalamanderLive™ is NIMS Compliant*

# Highlighted Features

## GIS MAPPING

Enhance tactical operations with satellite map imagery of the event with real-time plotted resource locations.

## SIV

Increase security by verifying in real-time that the ID scanned is an active, vetted, and qualified individual.

## Qualifications & Training

Choose from a master list of qualifications and trainings to assign to people and equipment, including 900 national standard qualifications.

## PLANS

Be proactive by pre-creating event templates that can be activated at any time. Include assignments (location information), people, and equipment.

## Chart

View and manage resources in assignments within an event with this interactive ICS Chart.

## Resource Timer

Know how long personnel have been assigned and set timers to ensure people do not exceed limitations.

## Event Merging

Join events from the same organization or multiple external accounts, to create a common operating picture.

## Burn Down Tile

Easily account for hourly and daily costs for resources during an event in real-time.

## Communications

Send messages to personnel, requests for deployable equipment, and / or emails to personnel in an active event or within a plan.

## Collections

Save time by pre-creating collections. Simply scan the collection barcode when a group is deployed to an event to check-in resources.

## Self Registration

Quickly have personnel register to be added to the Personnel List within SalamanderLive by entering their personal informaiton.
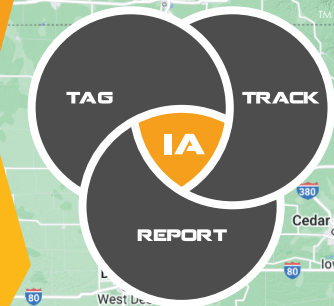

## ASSET MANAGEMENT

Easily account for all inventory, fixed and consumable, ensuring no item is lost or alert / service missed.

## Rostering

Quickly view all personnel that are apart of the event and also edit missing assignment check-ins.

# INTELLIGENT ACCOUNTABILITY™

## TAG APP
A mobile digital credential that allows a user to check-in to an event from anywhere before arriving or at the scene.

## TRACK APP
A mobile solution to check people in and out of assignments and use it to quickly identify where people are at.

## INVENTORY APP
Issue, return, adjust, and audit assets from anywhere to track the issuance and return of assets and make adjustments on-the-fly.

### AVAILABLE FOR:

## RAPID TAG
Quickly create interoperable IDs to account for visitors, media, volunteers, Mutual Aid, and more.

## RAPID TAG EVAC
Quickly create evacuee IDs to instantly TRACK location, destination, special needs, and family reunification.

## COMMAND
Analyze, manage, and reposition resources in a simple ICS chart view, with drag-and-drop functionality.

## TAG
Salamander TAGs all resources, both people and equipment. TAGs can be either a static printed credential or a digital credential and are connected to an extensive profile located in SalamanderLive. Inside the Salamander TAG is a database that works in a comms-out environment. This TAG is the foundation of INTELLIGENT ACCOUNTABILITY.

## TRACK
TRACK solutions increase situational awareness by providing real-time and a cohesive view of activity. With TRACK, move people through assignments as an event is occuring, giving you full visibility to who is where. Effectively manage activities by identifying resources en route or on-scene, their current location, and assignment.

## REPORT
Salamander users are provided with data collected from our solutions during and after an event. This includes resource usage, personnel times, patient activity, inventory, and much more. Reports can be pulled from a large selection of pre-set options and are detailed with up to-the-second accuracy that can be used for audits and reimbursements.
