

See Your Personnel Through a Different Lens

Take control of tracking your personnel's temperature and questionnaire data all while using your existing SalamanderLive™ subscription. Salamander has integrated with a third-party to provide existing SalamanderLive subscribers access to a self-service temp scan solution.

Continue to keep social distancing a top priority by removing personnel from the front line to temperature check and question each person that enters a building. Subscribe to Salamander's Wellness Check Monitor Solution for a secure and automated way to track temperature, questionnaires, and entry points, all while only using your existing managed Salamander database.

Wellness accountability for personnel starts in just a few simple steps. Help ensure the safety of your personnel through secure temperature screening, identity verification, and access management.

1. Select name & enter code
2. Answer 4-5 industry default questions
3. Scan on personnel is conducted for temperature
4. Results are recorded
(Any scan results over the preferred temperature will result in a notification sent to the person's manager)

Integration Is Already Complete!

Simply subscribe to services & configure hardware

Elo Kiosk & Elo Camera

Automated solution saving on having to staff
