

Consider Upgrading to Statewide

Many states place their **trust** into Salamander to account for their resources to create a level of **standardization** and **interoperability** between all organizations.

Statewide SalamanderLive™ implementations greatly increase situational awareness and interoperability from the state down to the local level, providing safety, security, and financial value.

Maintain real-time, state-level awareness as users throughout the state manage their organization's personnel and equipment data, from which an interoperable badge is created and used for verification and accountability during NIMS Type 5 to Type 1 events.

Footprint as of 5/14/2024

Why are so many customers upgrading to a statewide implementation?

- **Standardizes** resource typing throughout the state
- **Standardizes** interoperable state to local badging
- **Standardizes** event accountability and reporting
- **Standardizes** deployable resource visibility in real-time

In addition to the 17 highlighted statewide and state-level implementations shown here, Salamander has over 35,000 government and response agencies using the Salamander platform across all 50 states.

Here are more benefits to a statewide implementation:

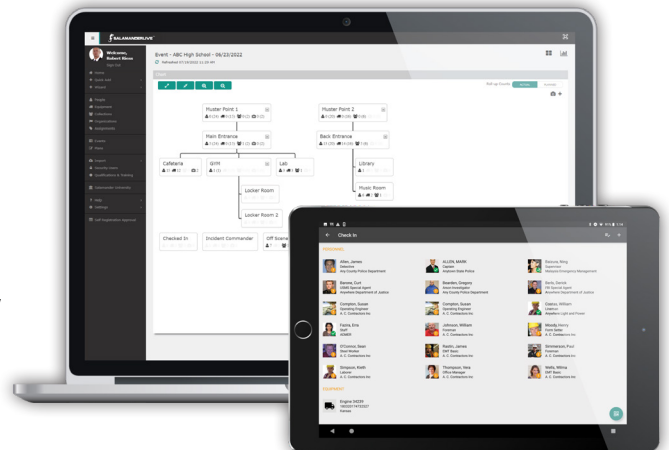

TAG

- Standardize resource typing with personnel and qualification management that aligns with FEMA's RLT and NQS
- Establish state-level qualifications for standardized credentialing
- Access and manage assets, ensuring resources are maintained, and consumable levels are visible
- Establish an interoperable state ID for government and first response agencies that is used during deployments of all types

TRACK

- Salamander apps, for both Android and iOS, verify, track, and timestamp all resource activity in real-time
- Resources are managed in an ICS chart format, creating a common operating picture for everyone involved
- Accountability in comms-in and comms-out environments
- Field-captured event data immediately available for all users, based on security permissions and organizational hierarchy

REPORT

- Standardize, manage, and report on all responders' state and federal qualifications and training (NQS, NWCG, USAR, AHIMT, NFPA, etc.)
- Event / incident reports with time and date stamps for reimbursement and more
- Quickly manage, customize, and request equipment and inventory, including a robust deployable asset management database
- Access log reports, providing security check on changes made to people, equipment, and event data
