

ASSET MANAGEMENT

Your Assets. Fully Visible.
Fully Controlled.

Store your organization's equipment database within Salamander's secure cloud-based application, SalamanderLive, and gain real-time access to your invested assets. Every asset plays a critical role in your operations. By storing essential information within each asset's profile, you ensure the information you need is accurate, current, and accessible when you need it. All activities associated with assets are logged in real-time, giving you complete visibility of where assets are, their status, condition, needed attention, and who has what.

ASSET MANAGEMENT FEATURE OVERVIEW

ASSET CONFIGURATION & VISIBILITY

These features control how assets are defined, organized, and seen across the system

Deployable Equipment – Toggle deployable equipment to the Account or Organization level to ensure visibility for the appropriate users

Custom Fields – Create account-specific fields when details are not included in the default asset profile

Asset Details – Add comprehensive information, including general profile data, vehicle details, purchasing info, location and contact data, consumables, and custom-defined fields

Actionable Parent / Child Relationships – View and access configured parent / child relationships directly within an asset's profile

IDENTIFICATION & TAGGING

Ensure assets are clearly labeled and easily identifiable

Equipment TAG – Print a Salamander TAG encoded with profile data such as image, ID, organization name, and expiration date

COMPLIANCE, AUDITING & QUALIFICATIONS

These capabilities support audits, certifications, and regulatory readiness

Audit Management – Mark assets for inclusion in the auditing process

Apply Qualifications – Assign certifications with issue and expiration dates, upload supporting files, and optionally encode qualification data into the QR code

DOCUMENTATION & ACTIVITY HISTORY

Centralize records and maintain a clear history of asset activity

Add Files – Upload and manage documents, spreadsheets, and images with status, category, start / expiration dates, and descriptions

Notes Logs – Record reports and notes with user name, date, and timestamps

Reporting – Access a wide range of reports, including alerts, reordering needs, and complete asset history

TRACKING, ALERTS & OPERATIONAL READINESS

Designed to help teams stay proactive and avoid missed actions

Set Alerts – Add, edit, and complete alert tasks directly within an asset's profile

Maintain Accurate Consumable Counts – Track consumables in real time as items are issued or used, with automatic reorder alerts

Dedicated Interface for DEPLOYABLE EQUIPMENT

Salamander offers a dedicated interface to view and request deployable equipment from your Organization or Account. When an event or incident occurs and assets need to be deployed quickly, all information is readily available to support rapid deployment. Our interactive map pins all deployable assets to give a clear visual of where equipment is located.

Requesting equipment is fast and straightforward. There is no need to search for contact information or verify availability as everything is visible with one click. Simply choose the asset you need, and a pre-populated request form appears with the equipment ID, name, contact details, and a requesting message. Add any additional verbiage necessary and send the request instantly.

Top-to-Bottom Visibility Across Parent and Child Assets

With Salamander's organizational hierarchy, administrators can control exactly what level of visibility is required for their Account. When creating users, administrators can assign them to their organization and choose whether they should also see any child organization's data beneath it. For example, a local organization may only view equipment tied to its organization, while a State-level account can access equipment associated with the State (parent) as well as all associated organizations (children).

This structure allows visibility to be managed from the top-down, ensuring that each user sees precisely what they need to make informed operational and business decisions.

Knowing What You Own Is Just The Beginning

Add Salamander's Inventory Management to your Asset Management strategy for complete control and full visibility across the entire inventory lifecycle. Always know what assets you have on hand, where they are located, who they are assigned to, and the condition they are in, all in real-time.
