

BUILT FOR COMPLETE SHELTER ACCOUNTABILITY

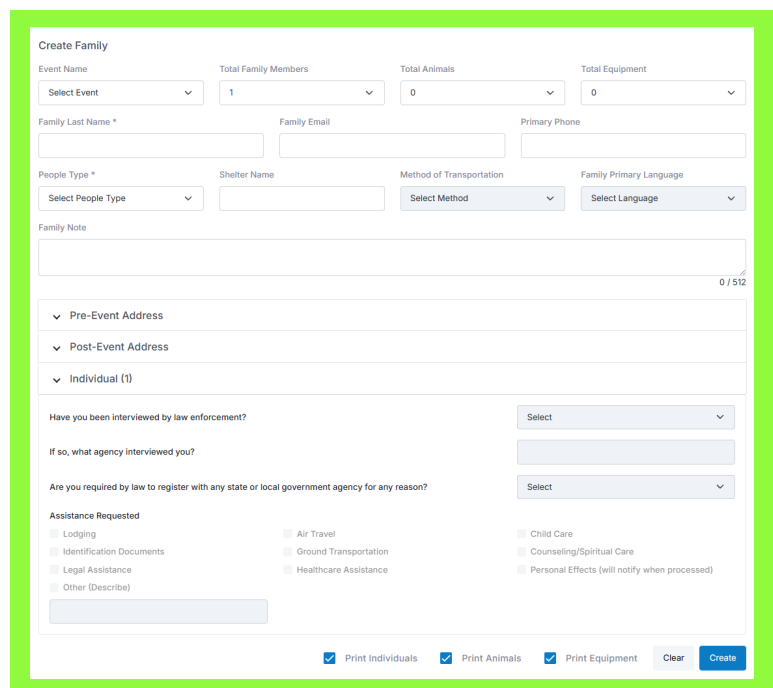

Salamander is utilized throughout the US for accountability for shelters, evacuee, and migrant missions and initiatives. Together, we help organizations collect information to create unique credentials for evacuees, migrants, volunteers, workers, and responders. We have established workflows to document the check-ins of individuals at assignments. All information is reportable in real-time, any time. Below are areas where established workflows are in use.

Supporting Shelter, Evacuee, and Migrant Operations Across the U.S.

Shelter-Seeking Individual Management Made Easy with Family Intake

Family Intake simplifies and streamlines the entire intake process, helping teams efficiently register shelter-seeking individuals while minimizing administrative workload. By providing a structured, user-friendly workflow, staff can quickly capture essential information.

As a result, staff can seamlessly transition from one intake to the next, ensuring every family receives timely support and assistance when they need it most. This efficient process improves data accuracy, and enables intake teams to serve more individuals in less time.

The 'Create Family' form is a structured interface for registering individuals and families. It includes fields for Event Name, Total Family Members, Total Animals, and Total Equipment. Below these are input fields for Family Last Name, Family Email, and Primary Phone. The form also includes dropdown menus for People Type, Shelter Name, Method of Transportation, and Family Primary Language. A Family Note field is provided with a character count (0/512). The form is divided into sections for Pre-Event Address, Post-Event Address, and Individual (1). It includes checkboxes for 'Have you been interviewed by law enforcement?' and 'Are you required by law to register with any state or local government agency for any reason?'. A section for 'Assistance Requested' includes checkboxes for Lodging, Identification Documents, Legal Assistance, Other (Describe), Air Travel, Ground Transportation, Healthcare Assistance, Child Care, Counseling/Spiritual Care, and Personal Effects (will notify when processed). At the bottom, there are checkboxes for 'Print Individuals', 'Print Animals', and 'Print Equipment', along with 'Clear' and 'Create' buttons.

Key Features of Family Intake Interface

Family Intake is the interface used to manage individuals and families entering the location for the first time and then used to manage the family until their departure.

- Easy Add Wizard
- Lookup and Manage Interface
- Associate All Items to the Family
- Add All Family Members
- Add All Family Equipment
- Add All Family Animals
- Document All Needs
- Individually Assign to Assignments
- Report On All Activity

People, Equipment, and Location Accountability & Tracking

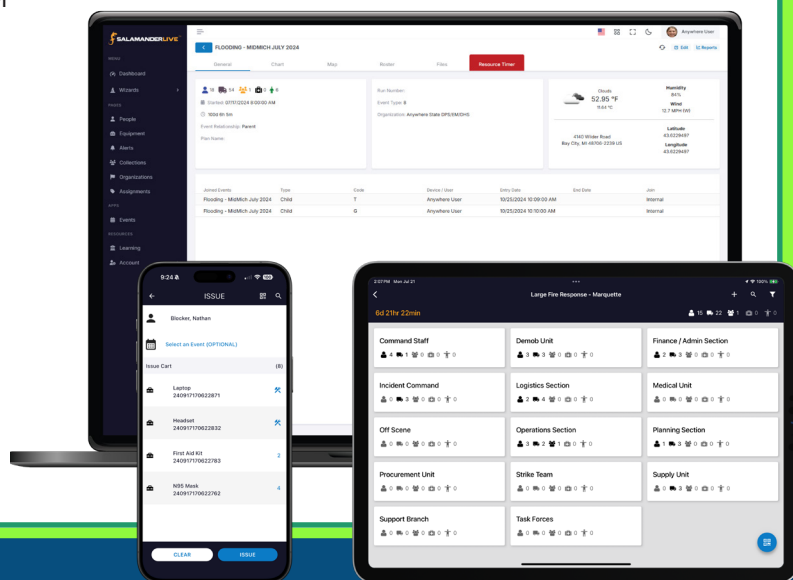

For true shelter accountability, everyone must be tracked; both the people seeking help and the personnel providing it. Salamander accounts for all of them. It then goes further by enabling equipment assignment and management, giving shelters visibility into usage and associated costs. Salamander tracks not only where someone or something is, but how long it has been there. The result is a complete, end-to-end accountability solution for shelters nationwide.

**Shelter-Seeking
Individuals**

Assignments**

ESTABLISHED WORKFLOWS:

SHELTER-SEEKING INDIVIDUALS:

Information Collection & Credentialing

Securely register individuals and create IDs with SalamanderLive at reception locations and shelters. Collect, store, and share important information such as:

- Basic identification and contact info
- Country of origin
- Mode and date of arrival
- Shelter, room, and bed assignments
- Date of departure / transfer

Equipment Accountability

Account for the issuance and return of equipment, such as radios, computers, tablets, and phones to all workers, including volunteers. The exchange of all equipment is documented and reportable at any time.

On-Scene / Off-Scene Accountability

TRACK on-scene / off-scene accountability at each shelter. Quickly capture the completion of workflows (medical checks, room / shelter changes, etc.) by scanning the ID barcode. This will provide real-time visibility to accurate shelter totals, enabling resource availability and distribution planning.

SHELTER WORKERS:

Information Collection & Credentialing

Have increased visibility to personnel and volunteers. Easily create a profile and print a credential using an on-site, dedicated responder / worker badging station. Scan badges to account for who is on-site.

Equipment Accountability

Account for the issuance and return of equipment, such as radios, computers, tablets, and phones to all workers, including volunteers. The exchange of all equipment is documented and reportable at any time.

On-Scene / Off-Scene Accountability

TRACK on-scene / off-scene accountability of workers at each of the shelters by scanning the ID barcode to check in / out of assignments. Easily create and manage an ICS structure of assignments. Access real-time, accurate worker PAR counts at each shelter, enabling resource availability and planning. All information is stored and reportable at any time.
