

SalamanderLive™ is a web-based solution and is the core of INTELLIGENT ACCOUNTABILITY™.

SalamanderLive's cloud-based application allows you to manage your resources, both people and equipment, as well as plans and events from anywhere that has internet connectivity. From creating interoperable tags, to providing optimal situational awareness at events, SalamanderLive™ is at the center of it all.

**SCAN FOR MORE
INFORMATION**

Functionality Details:

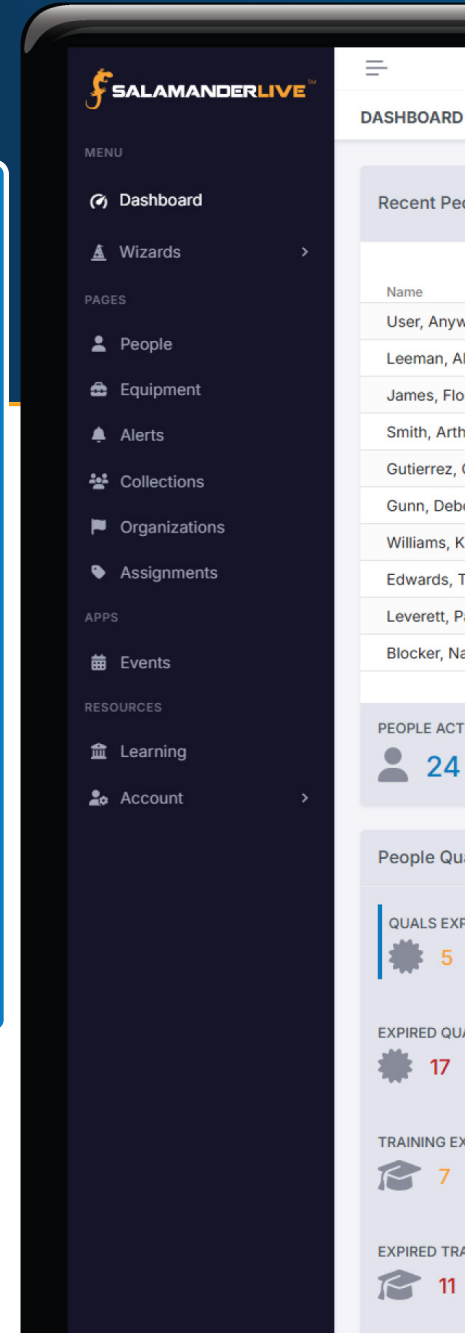

- Easily view and manage resource types (Responder, Equipment, Collection, Patient, and Civilian) within an assignment of an event
- Import / export all resource data including people and equipment with our self-service interface
- Ability to create an organizational top-down hierarchy which allows visibility of resources and reporting based on permissions
- Manage user access to Salamander features and organizational data driven by roles and permissions
- Customize the dashboard's layout by displaying, reorganizing, and removing tiles
- Information collected from Salamander's mobile and PC-based solutions syncs to SalamanderLive to create a common operating picture, all in real-time
- Run detailed reports in real-time for all aspects of events, equipment, personnel, patients, collections, and more
- Enhance your situational awareness with advanced geographical mapping services to view the location of people, equipment, events, and assignments
- Completely responsive solution that can be viewed on any screen and also contains Dark Mode and Full Screen Mode for whatever the environment

Resource Communications	Print Control
Visitor Management	Custom Fields
File Storage	NFC Read / Write
Customized Security Roles	Scan Mode

Plans & Events Management:

Roster	ICS Chart	Communications
Burn Down	GIS Mapping	Cost Usage Tracking
RAPID TAG	Resource Timer	Event Merging

Centralized Command & Control

Security:

Client Authorization - SalamanderLive operates on OAuth 2.0 authorization framework. The authentication is powered by Amazon Cognito, an identity platform offered through AWS. We provide two options to authenticate:

- **SalamanderLive Login** - Authenticate through SalamanderLive which handles the complete sign-on process. Accounts have the option to add an additional level of security for their users via Multi-Factor Authentication (MFA) through an authenticator app or through SMS Messaging.
- **Single Sign-On** - SalamanderLive will hand off the authentication via OpenID Connect to a third-party provider (providing a Single Sign-On option). Custom development can be added to this workflow providing additional Authorization / Roles / Permissions from third-party.

Other security features include:

- Fifteen-minute auto logout based on inactivity
- Verification of email addresses and mobile numbers for Users
- Password reset workflow sending code to verified User mobile numbers
- Brute force password resets on next login for Users
- Time sensitive Administrator created one-time temporary unique passwords for user accounts

User Authorization - SalamanderLive offers role based permissions which controls the user ability to use products and features as well as create, read, update, and delete data. These roles can also be customized based on account.

Integrations:

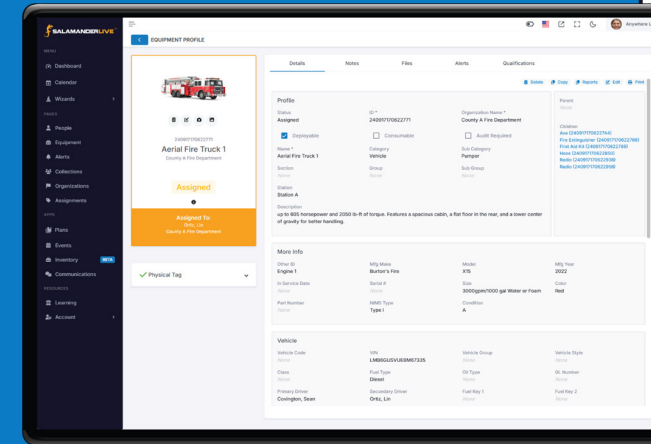

Connect SalamanderLive™ to the platforms you already use. Secure, custom integrations ensure seamless functionality, improved productivity, and smooth system upgrades.

API • Web Service • Email Integration

Profile Management:

Capture a vast amount of information within a Profile for every resource entered into SalamanderLive, including but not limited to:

- Storing cost rate details for both people and equipment that can be used to create event-specific cost reporting
- Create accountability TAGs for all resources including people, equipment, and collections
- Interface to manage qualifications and trainings for future assignment to resources
- Managing all profile information including editing and updating through our quick and easy interface. Mass updates can also be completed utilizing our importing process or with our edit multiple tool
- Ability to upload documentation into the profile (drivers' licenses, manuals, certifications, etc.)
- Capturing profile photos from your webcam or from saved images on a computer
- Establishing parent / child relationships by linking individual pieces of equipment for easier trackability and management
- Assigning / updating / removing certification qualifications and training qualifications for people and equipment
