

Control & Track Your Resources While Operating In The Field

TRACK APP

Once the TAG is created, we TRACK...

HOW DO YOU TRACK RESOURCES?

Resources can be tracked using the TRACK APP (with an iOS or Android mobile device). Scan, move, or add resources into assignments during an event to ensure that each resource is accounted for.

DO YOU TRACK RESOURCE LOCATION?

Yes! Within an event, the Map tile will display the location of the TRACK APP including the logged in user's name, phone number, organization, latitude, longitude, and more. Every time the device moves more than 50 meters, SalamanderLive will update its location on the map. Resources can also be tracked in Esri with an ArcGIS integration.

WHO / WHAT CAN I TRACK?

We can track anything that is tagged. The most common resources we track include responders, equipment, collections, evacuees / patients, and civilians. During an event, easily download or scan credentials from the TRACK APP to add to an assignment within an event.

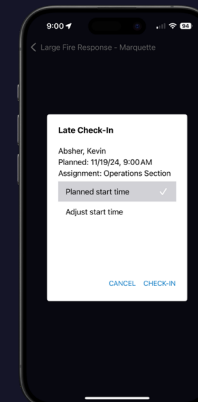

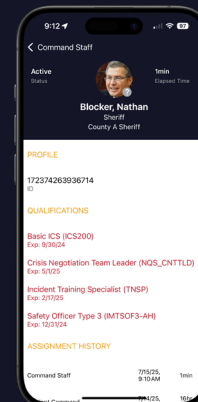

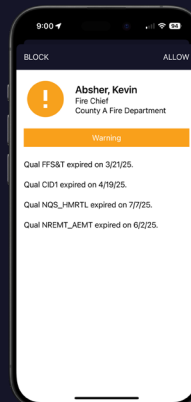

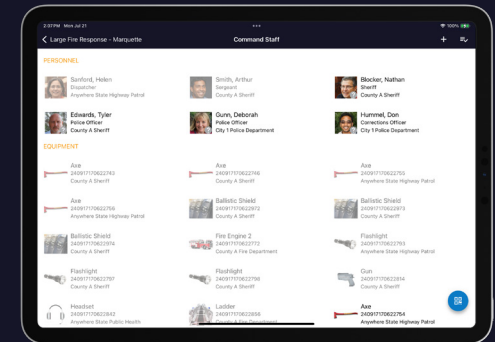

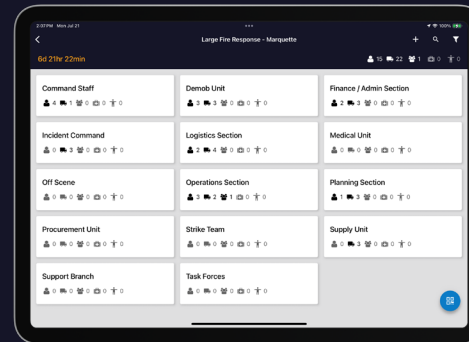

HOW DO YOU VERIFY TRACKED RESOURCES?

With Identity Verification turned on in the TRACK APP, any scanned SalamanderLive credential can be verified, including people belonging to other SalamanderLive accounts. Have peace of mind knowing exactly who is on-scene and what they are qualified to do.

Enhance situational awareness by tracking resources in the field, scanning TAGs for on-scene accountability, searching for resources via qualifications, and conducting PAR on any Android or iOS device.

- ICS tracking of resources in the field
- Automatically confirm that scanned credentials are valid and up to date with Salamander Identity Verification (SIV)
- Download resources directly from SalamanderLive™
- See all TRACK APP checked-in resources within SalamanderLive and / or all resources checked into an assignment
- Scan Salamander accountability TAGs for tracking on-scene
- Send field level data back to SalamanderLive for off-scene visibility
- Automatically updates SalamanderLive with personnel activity for accurate and detailed reporting
- Search for resources based on qualifications

With the TRACK APP, your existing mobile device becomes a powerful badge scanner. By leveraging the device's camera, resources can be scanned quickly and accurately without the expense or complexity of additional hardware.
